# Preliminary results 07.05.2021

Finished augmentations.

Added and modified script from Kristaps. Now it has two args:

- path\_in location of image+json files.
- path\_out result folder, where image+image\_mask should be saved.

~895 images could be added for the training.

TODO: fix val code. Some issues spotted after grid search run.

Run taskgen to test following combinations:

- Pre\_trained models:
  - deeplabv3\_resnet50
  - o fcn\_resnet\_50
- Replace head (whether to replace full model classification head or only last conv layer):
  - True
  - o False
- Learning rates:
  - 0.01
  - 0.03

## Image count:

- train 159
- test 45
- val 23

Total: 227

Deeplab shows similar results with a slightly bigger loss. Comparing each class loss, it is a bit better for 'zilejums'.Both of them perform better with weight type 'sum' and learning rate 0.01 Grid search:
