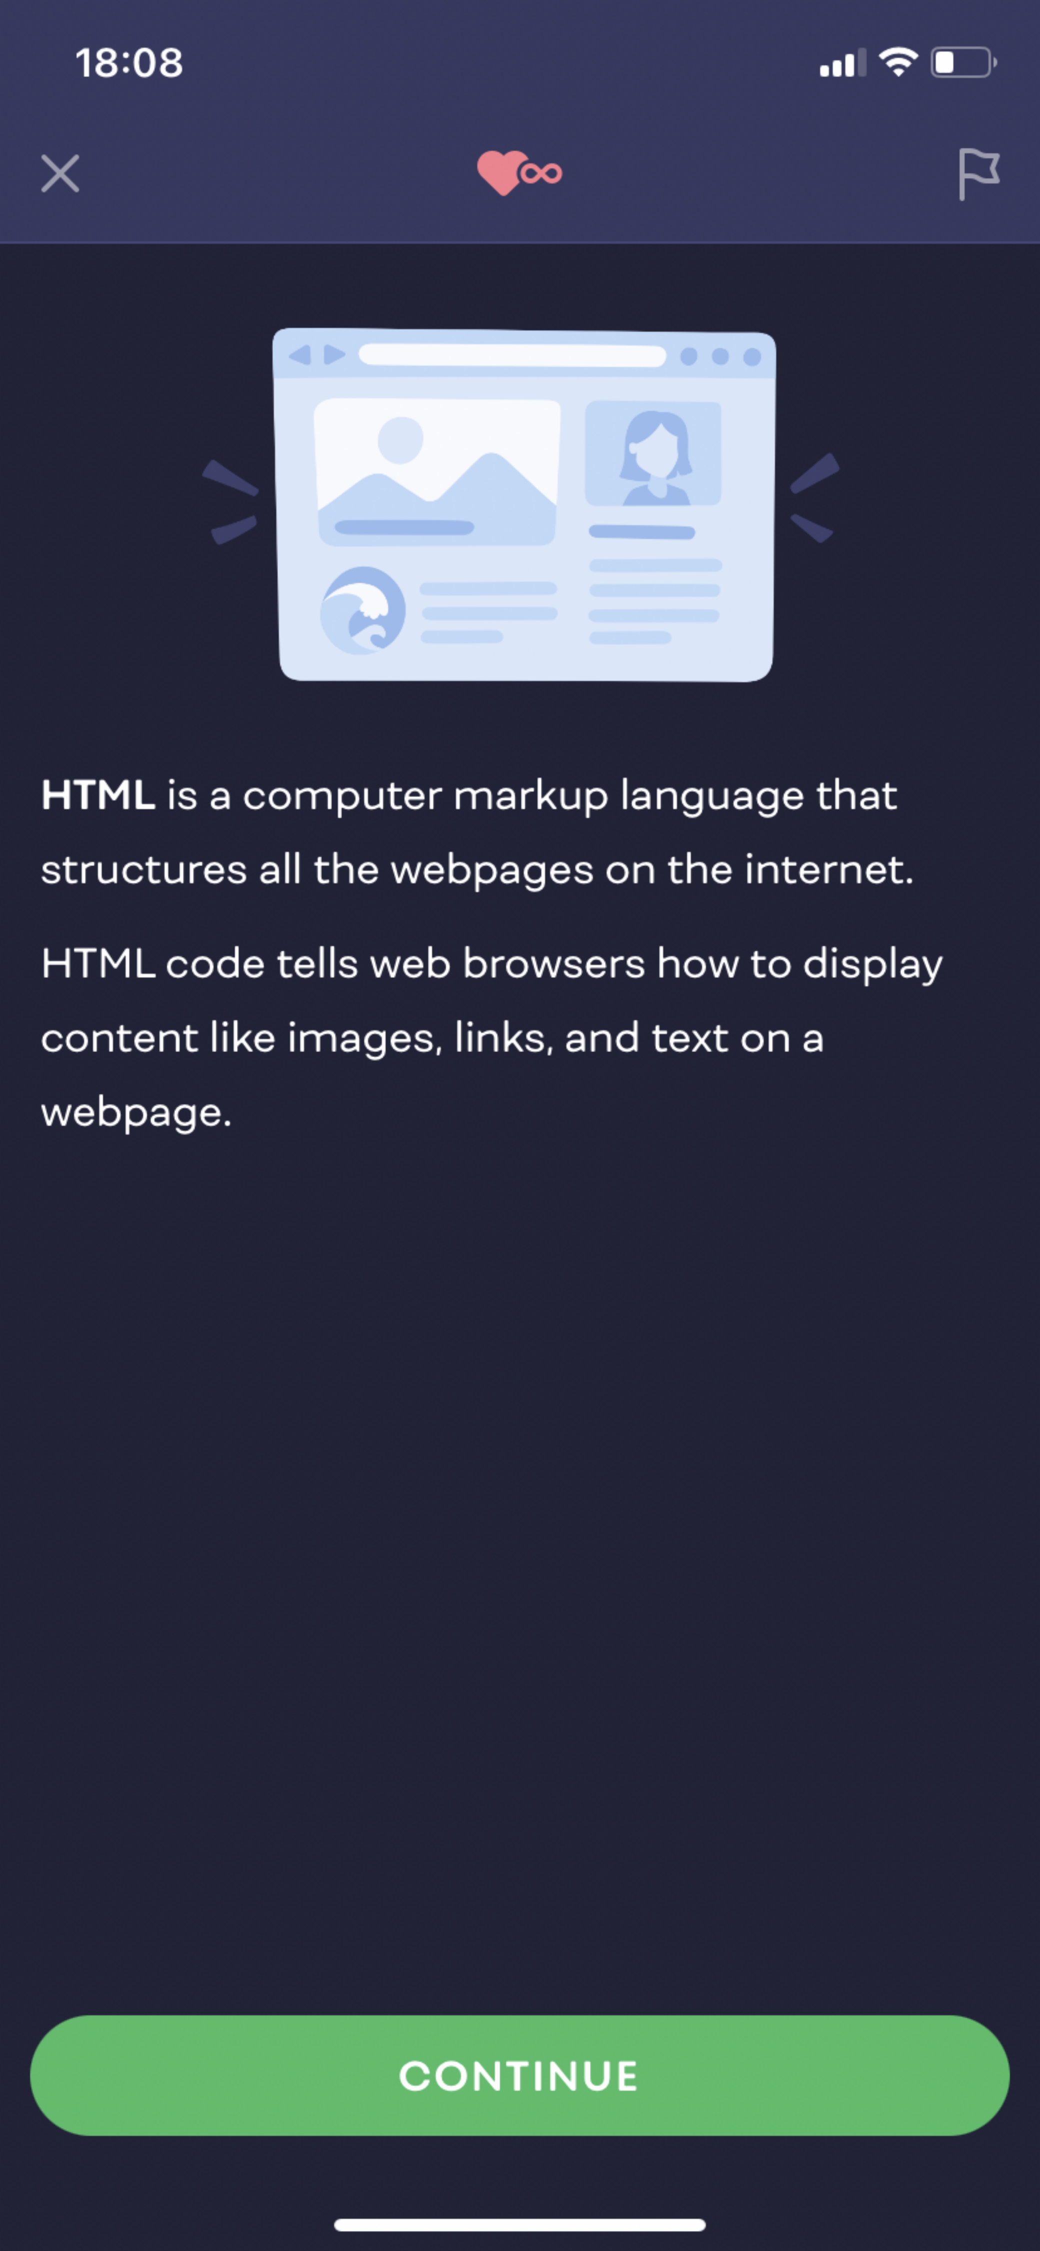
HTML Basics

Create webpages using HTML tags

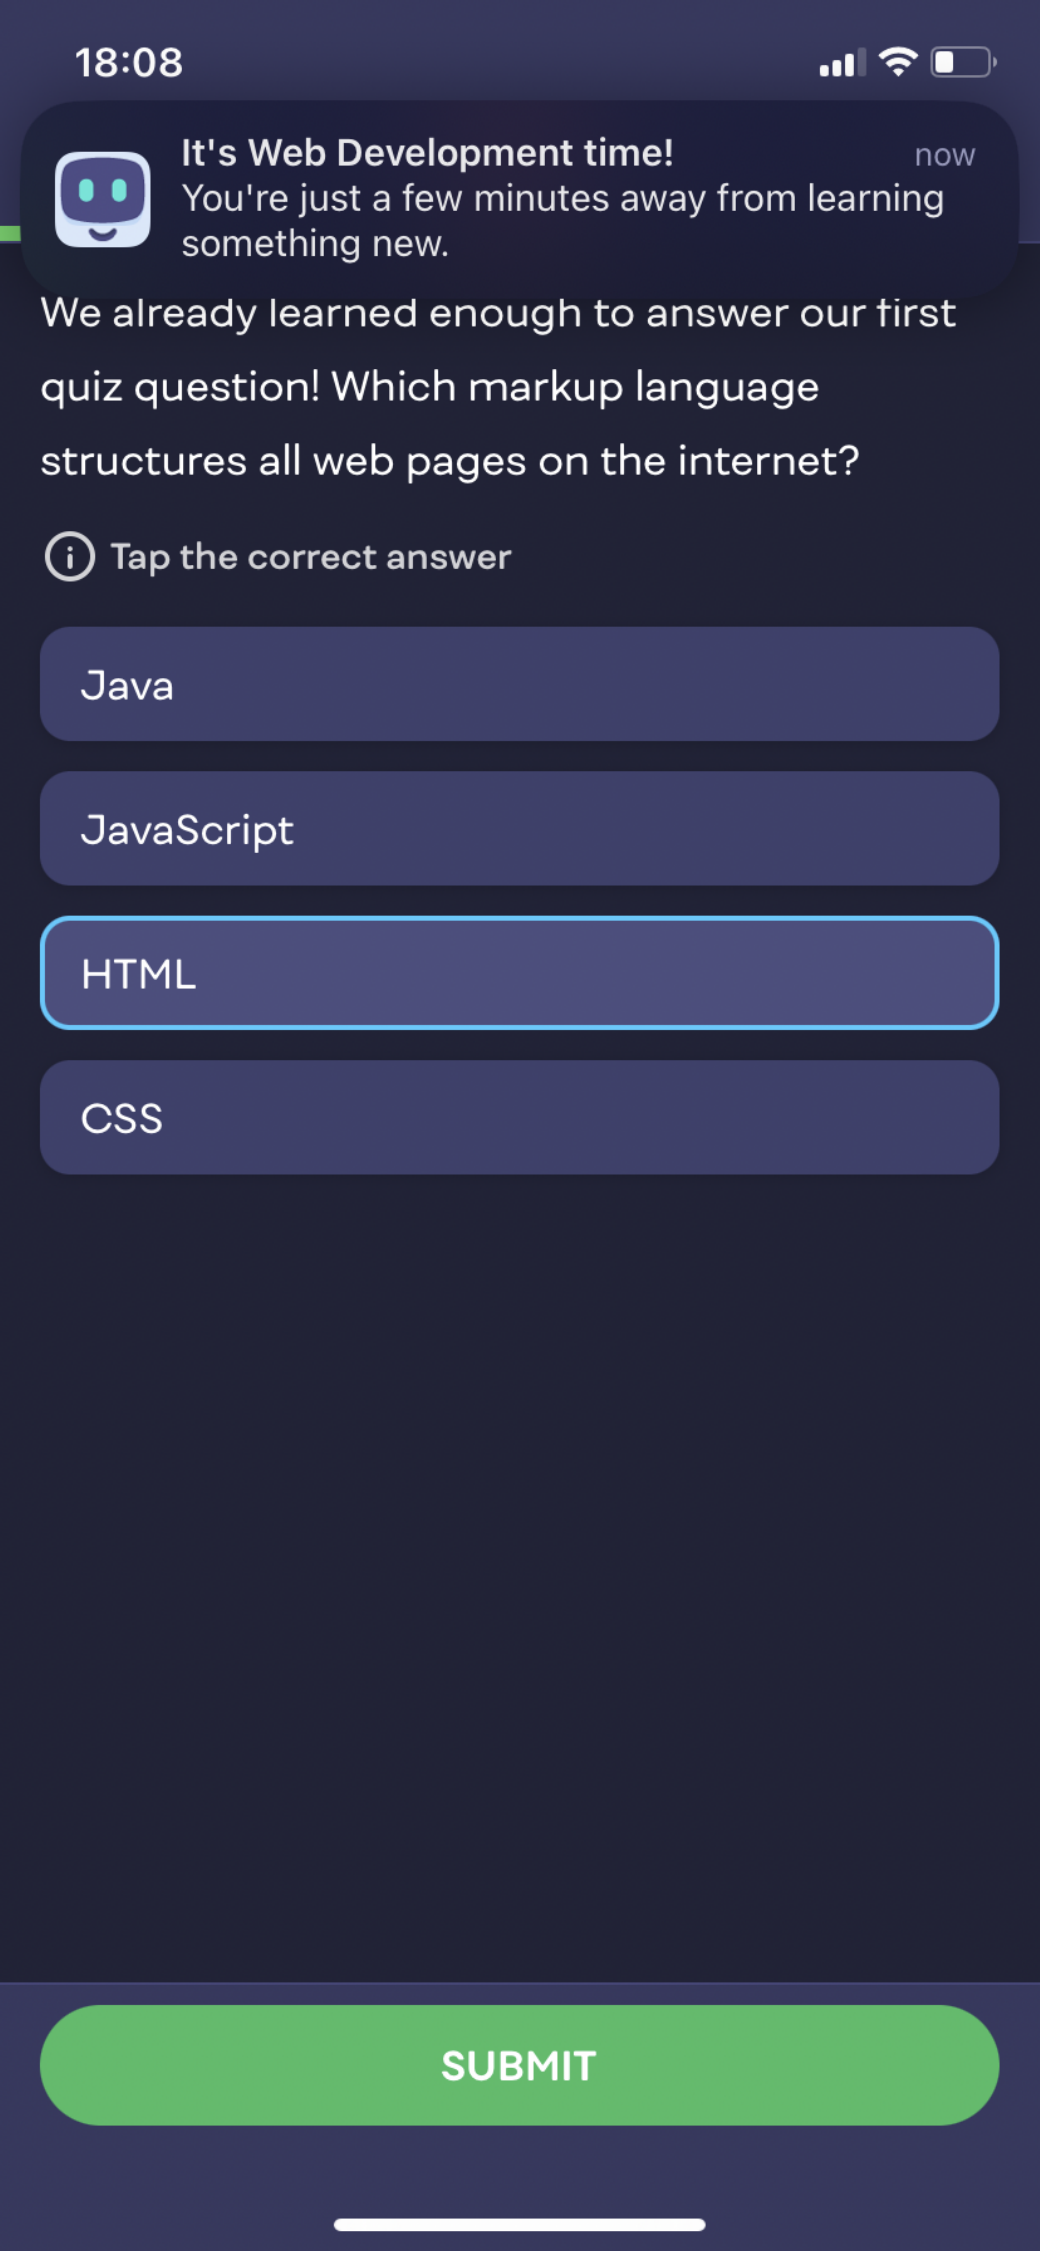
Learn new skill

Tap the card to start learning your first skill



HTML is a computer markup language that structures all the webpages on the internet.

HTML code tells web browsers how to display content like images, links, and text on a webpage.



18:08
now

It's Web Development time!
You're just a few minutes away from learning something new.

We already learned enough to answer our first quiz question! Which markup language structures all web pages on the internet?

Tap the correct answer

Tap the correct answer

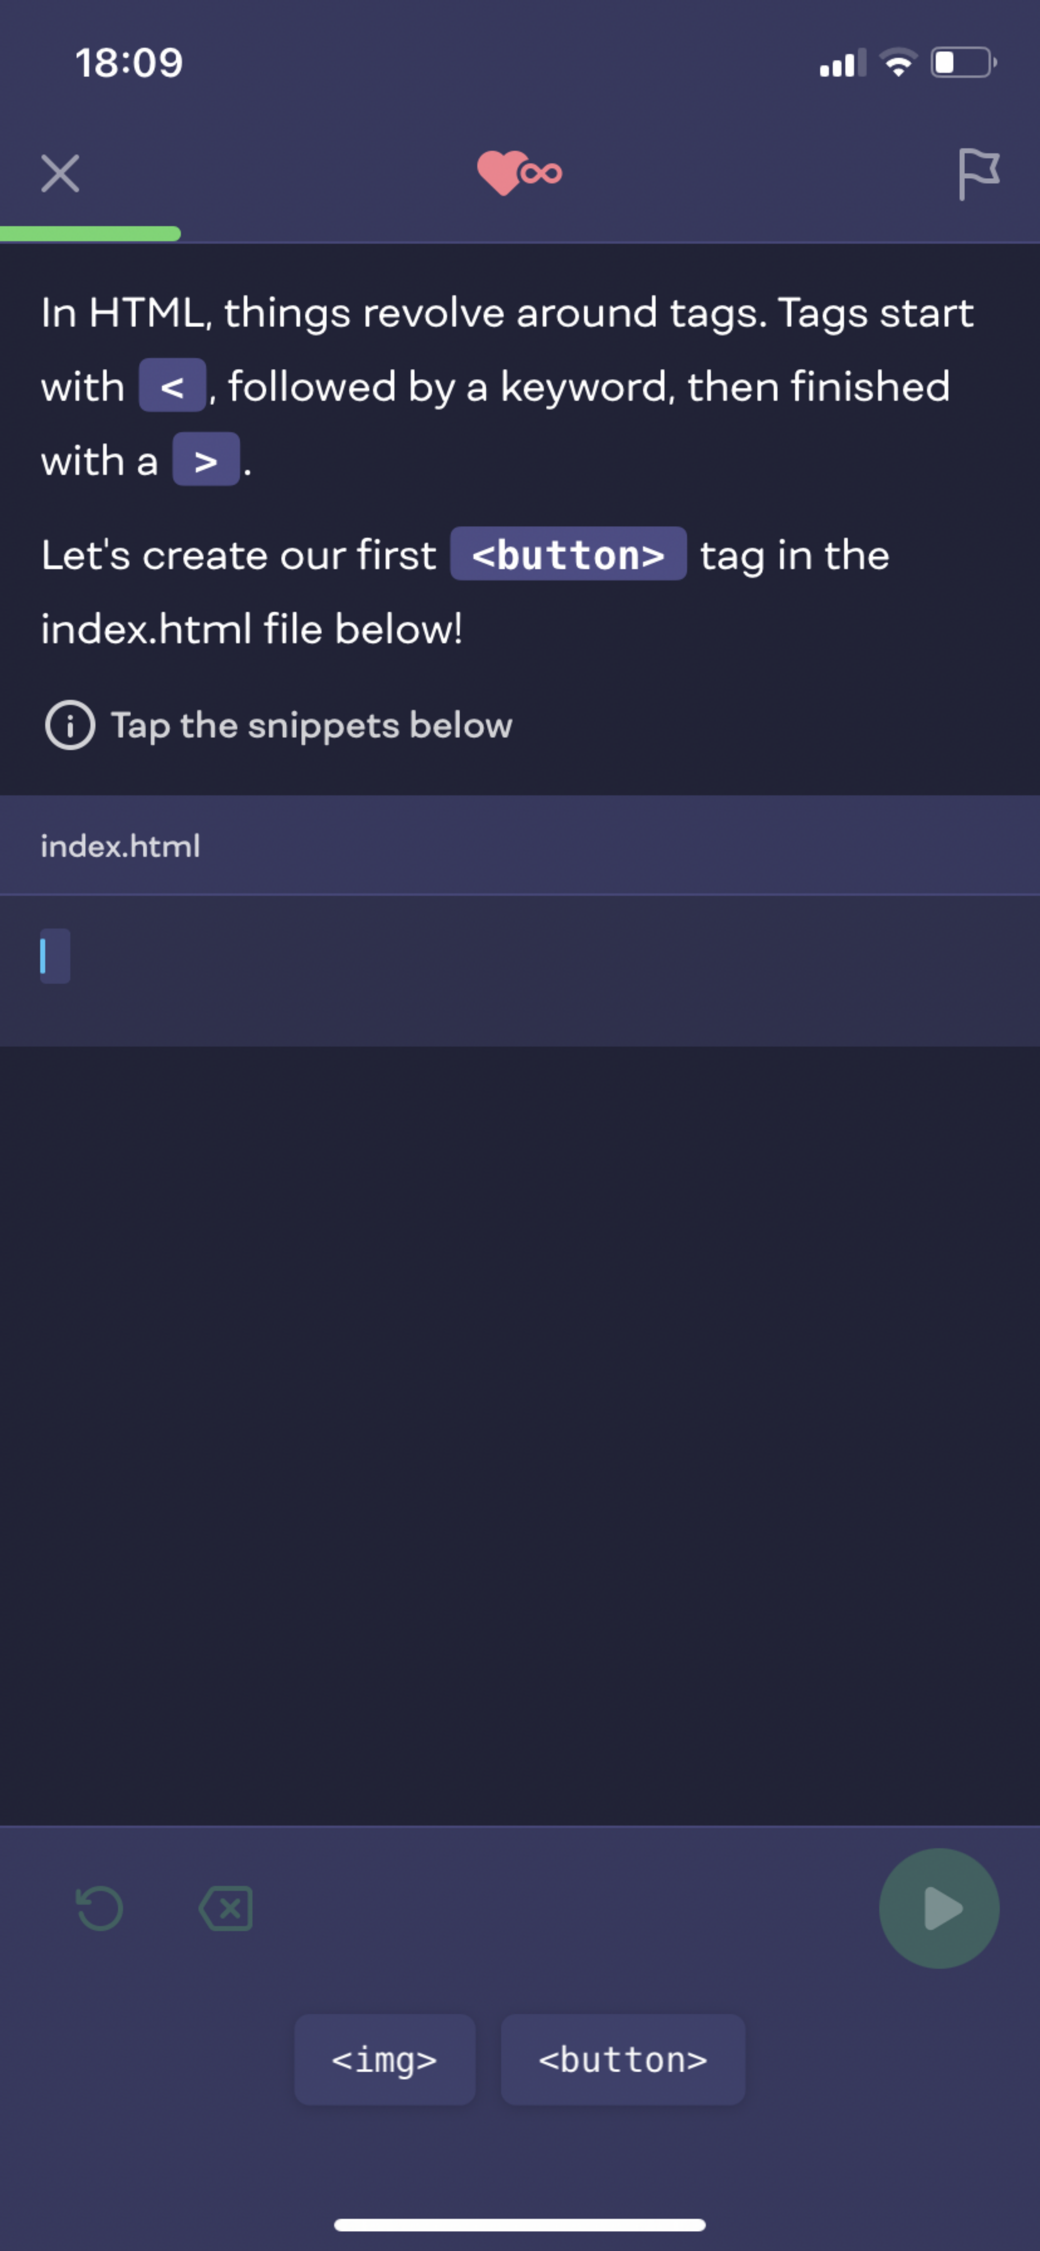
Java

JavaScript

HTML

CSS

That's right! We'll start our coding adventure by learning HTML.

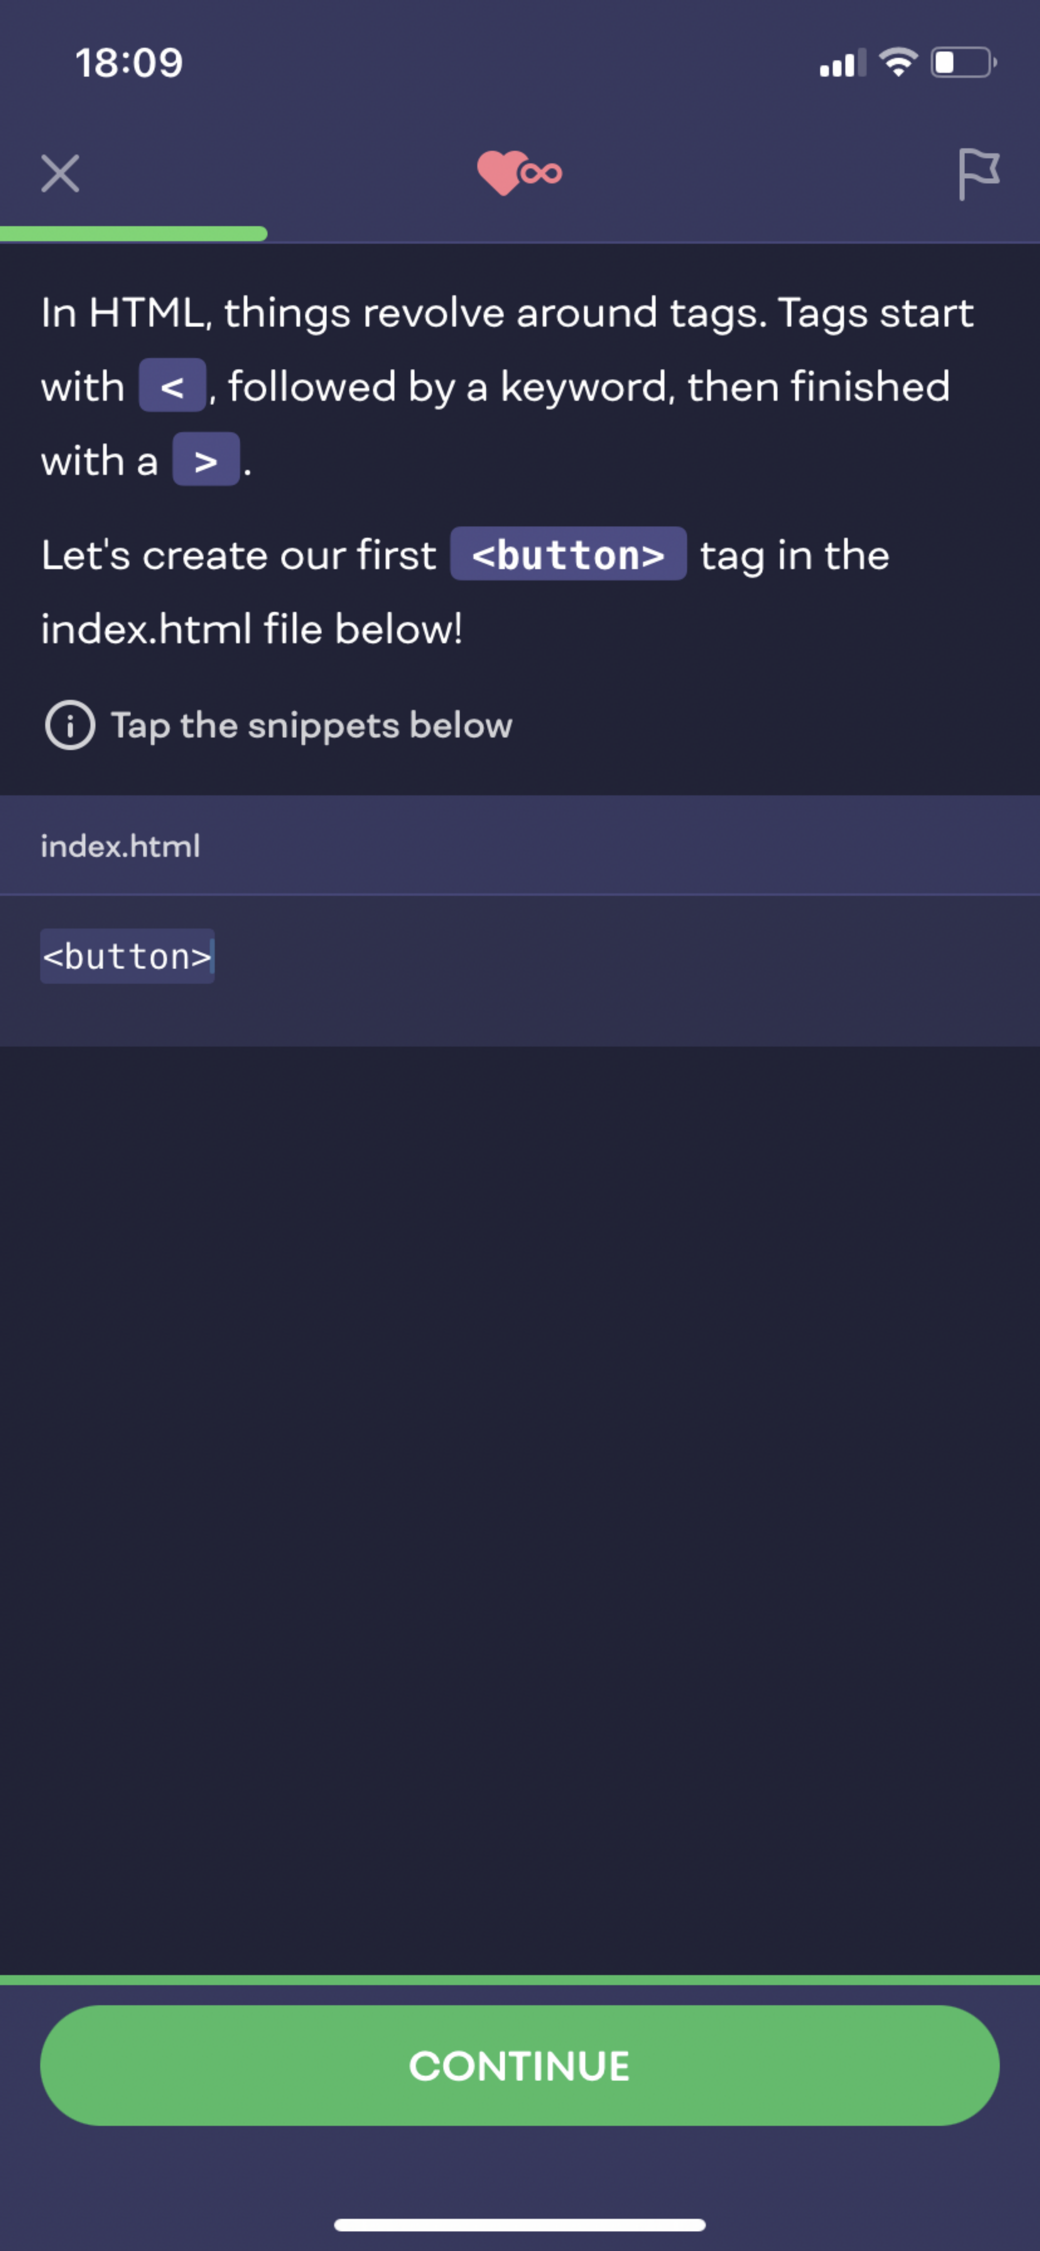


In HTML, things revolve around tags. Tags start with `<`, followed by a keyword, then finished with a `>`.

Let's create our first `<button>` tag in the index.html file below!

ⓘ Tap the snippets below

index.html



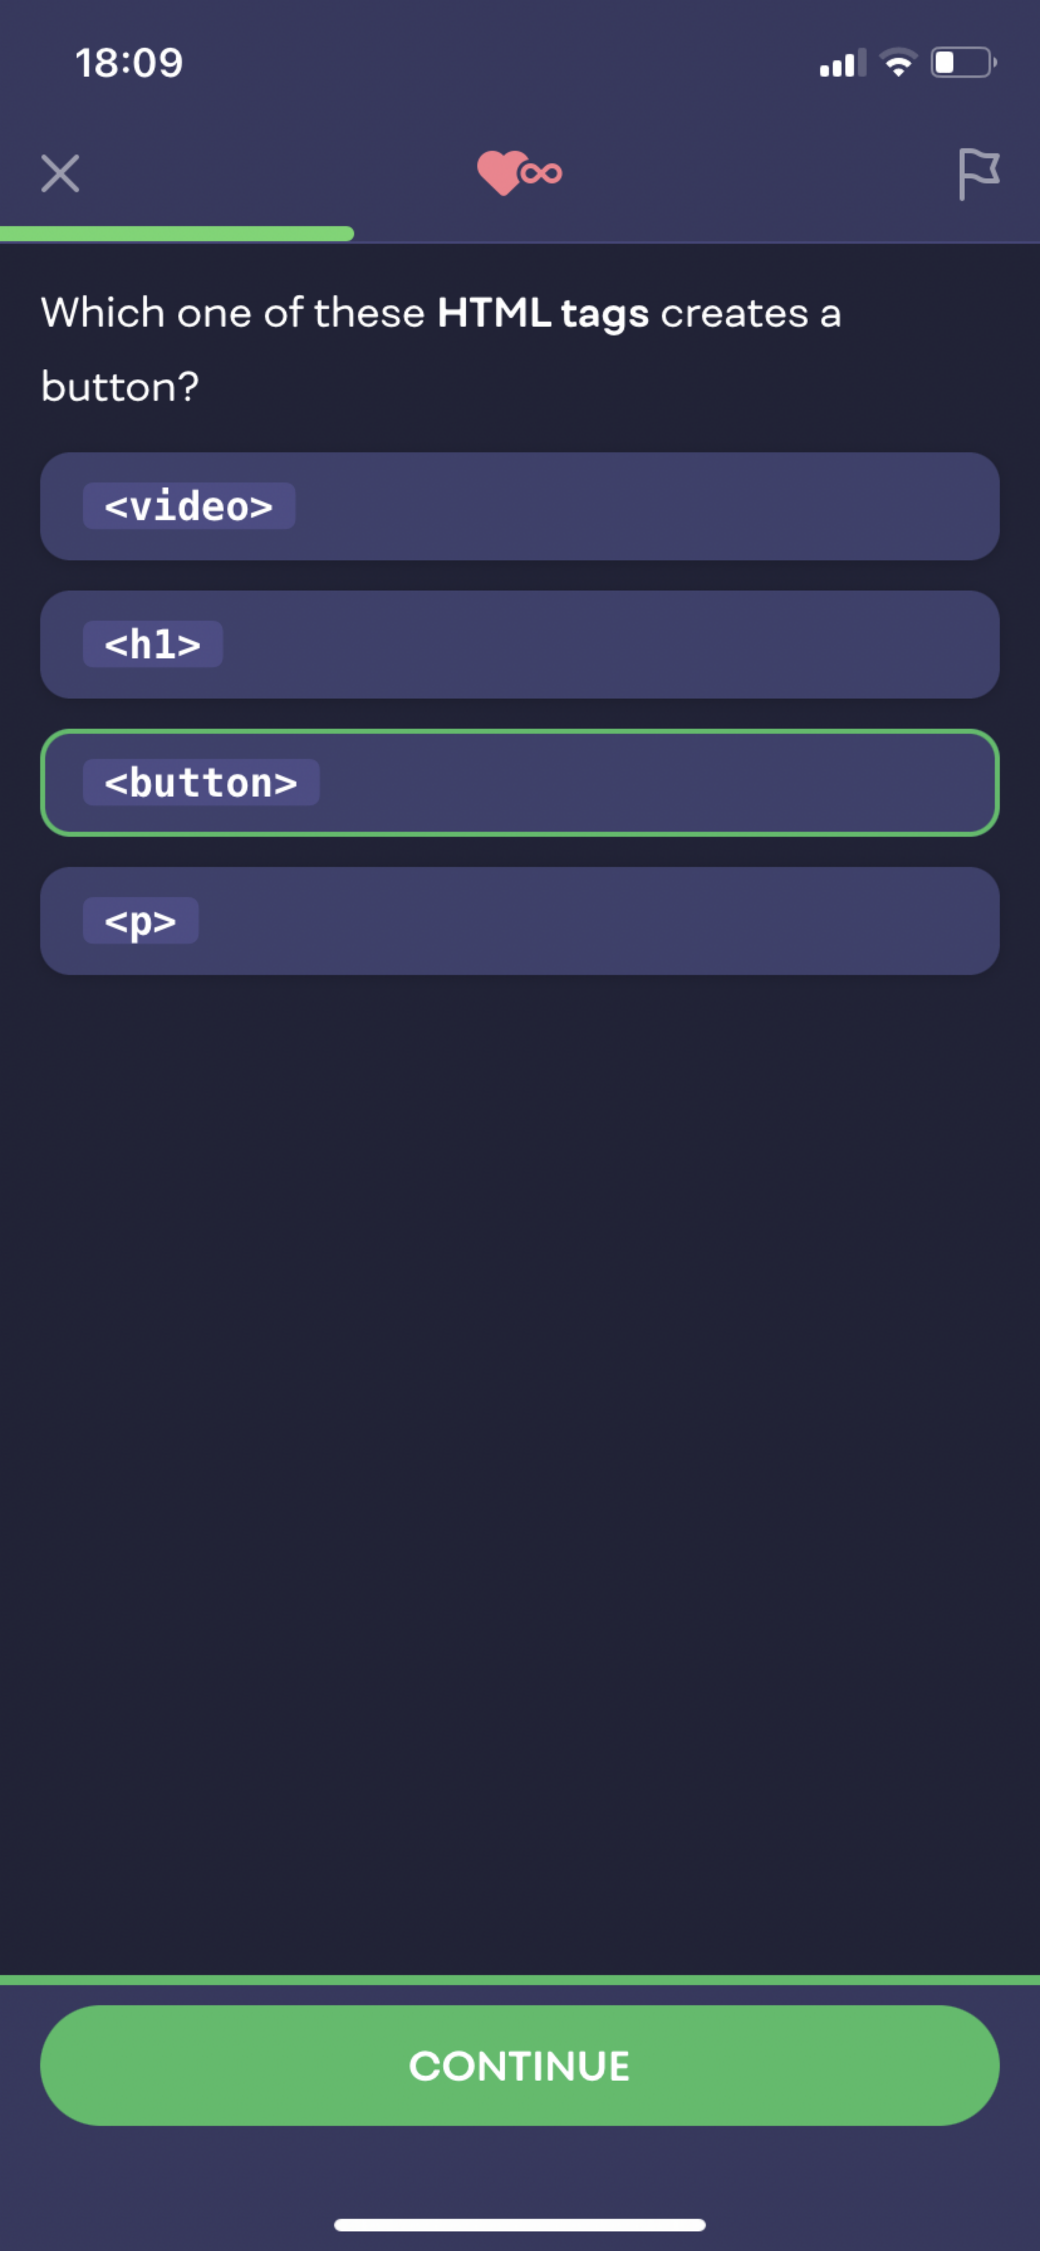
18:09
index.html
CONTINUE

In HTML, things revolve around tags. Tags start with `<`, followed by a keyword, then finished with a `>`.

Let's create our first `<button>` tag in the index.html file below!

Tap the snippets below

```
<button>
```

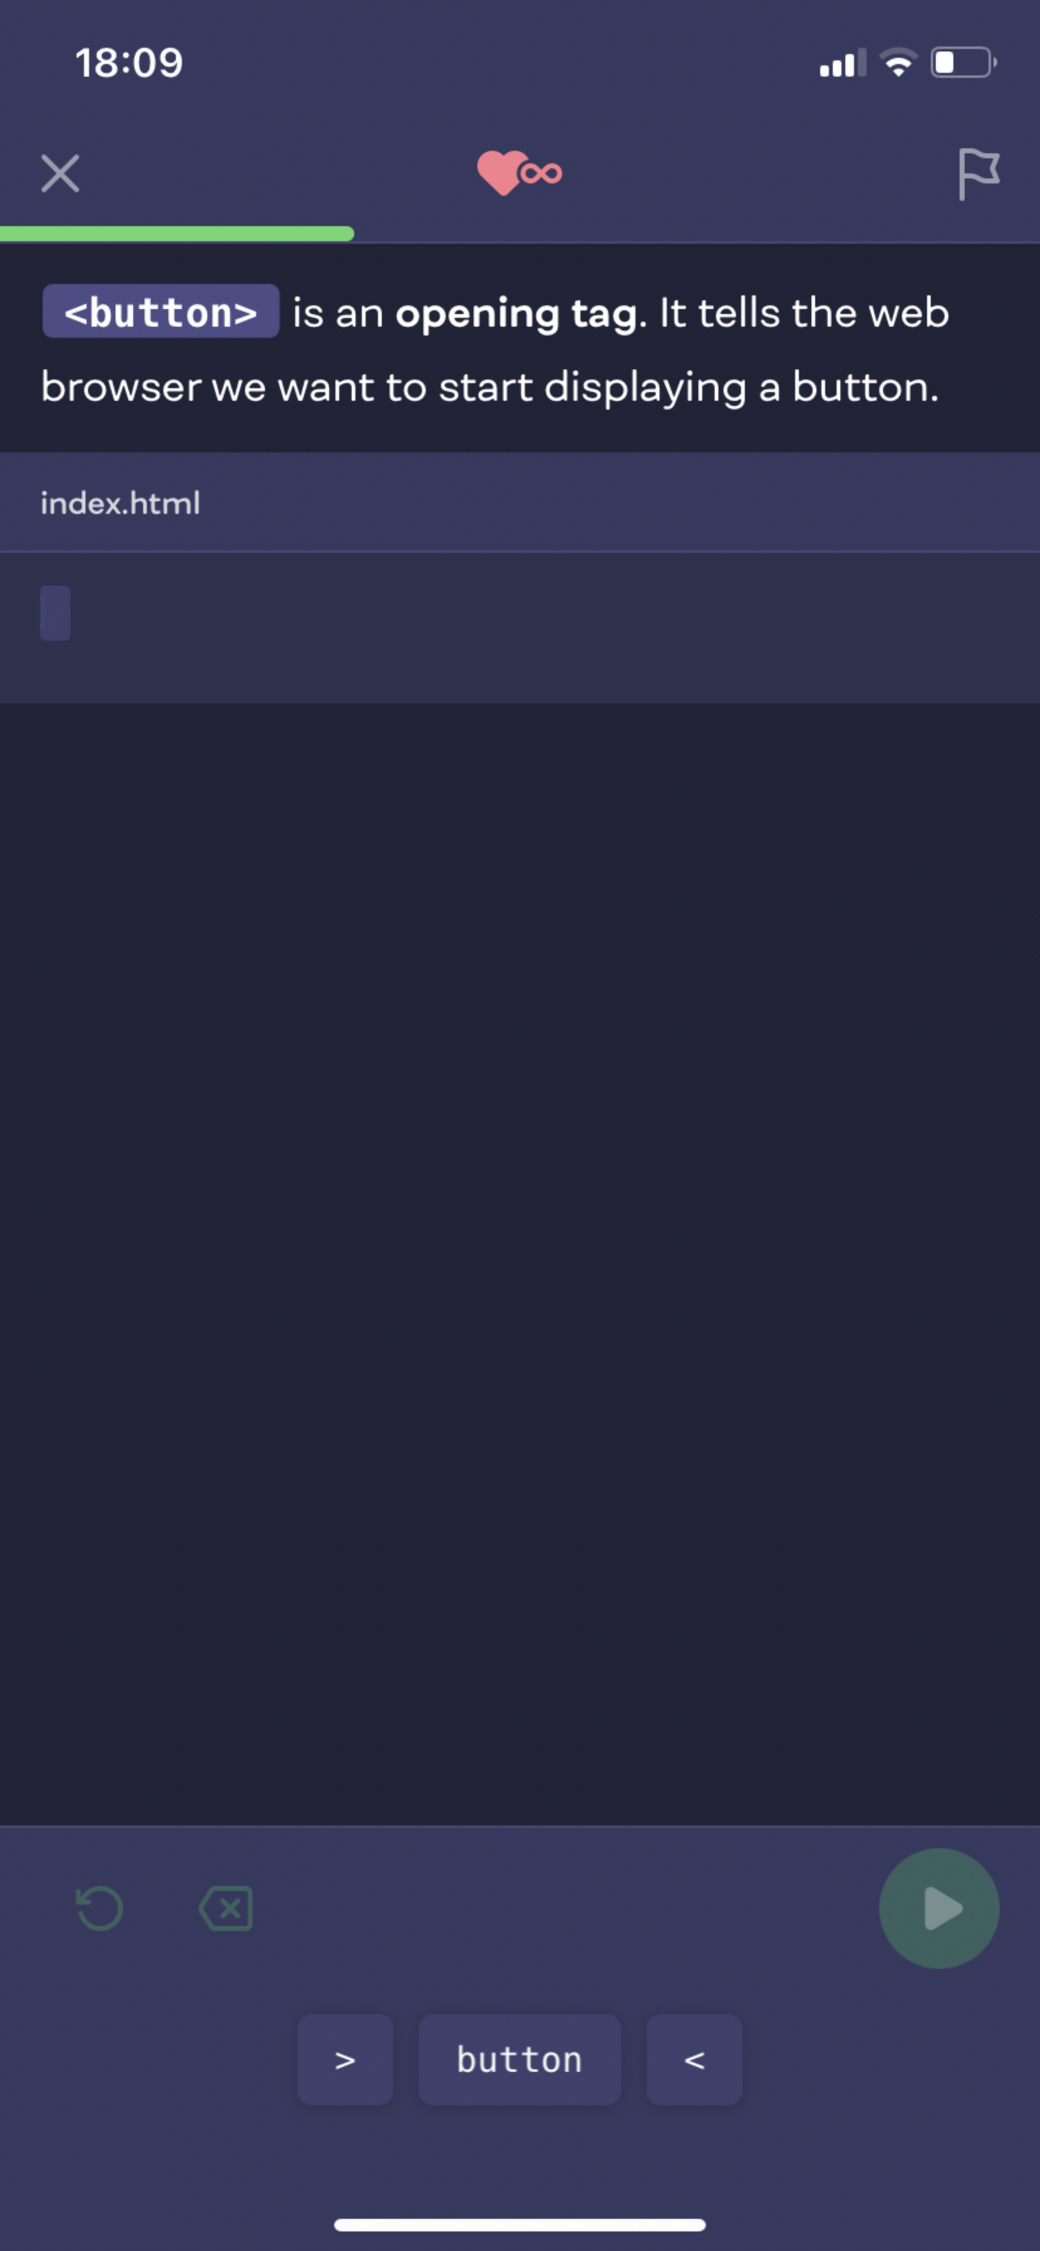


18:09

Which one of these **HTML tags** creates a button?

- `<video>`
- `<h1>`
- `<button>`
- `<p>`

CONTINUE



`<button>` is an **opening tag**. It tells the web browser we want to start displaying a button.

18:09

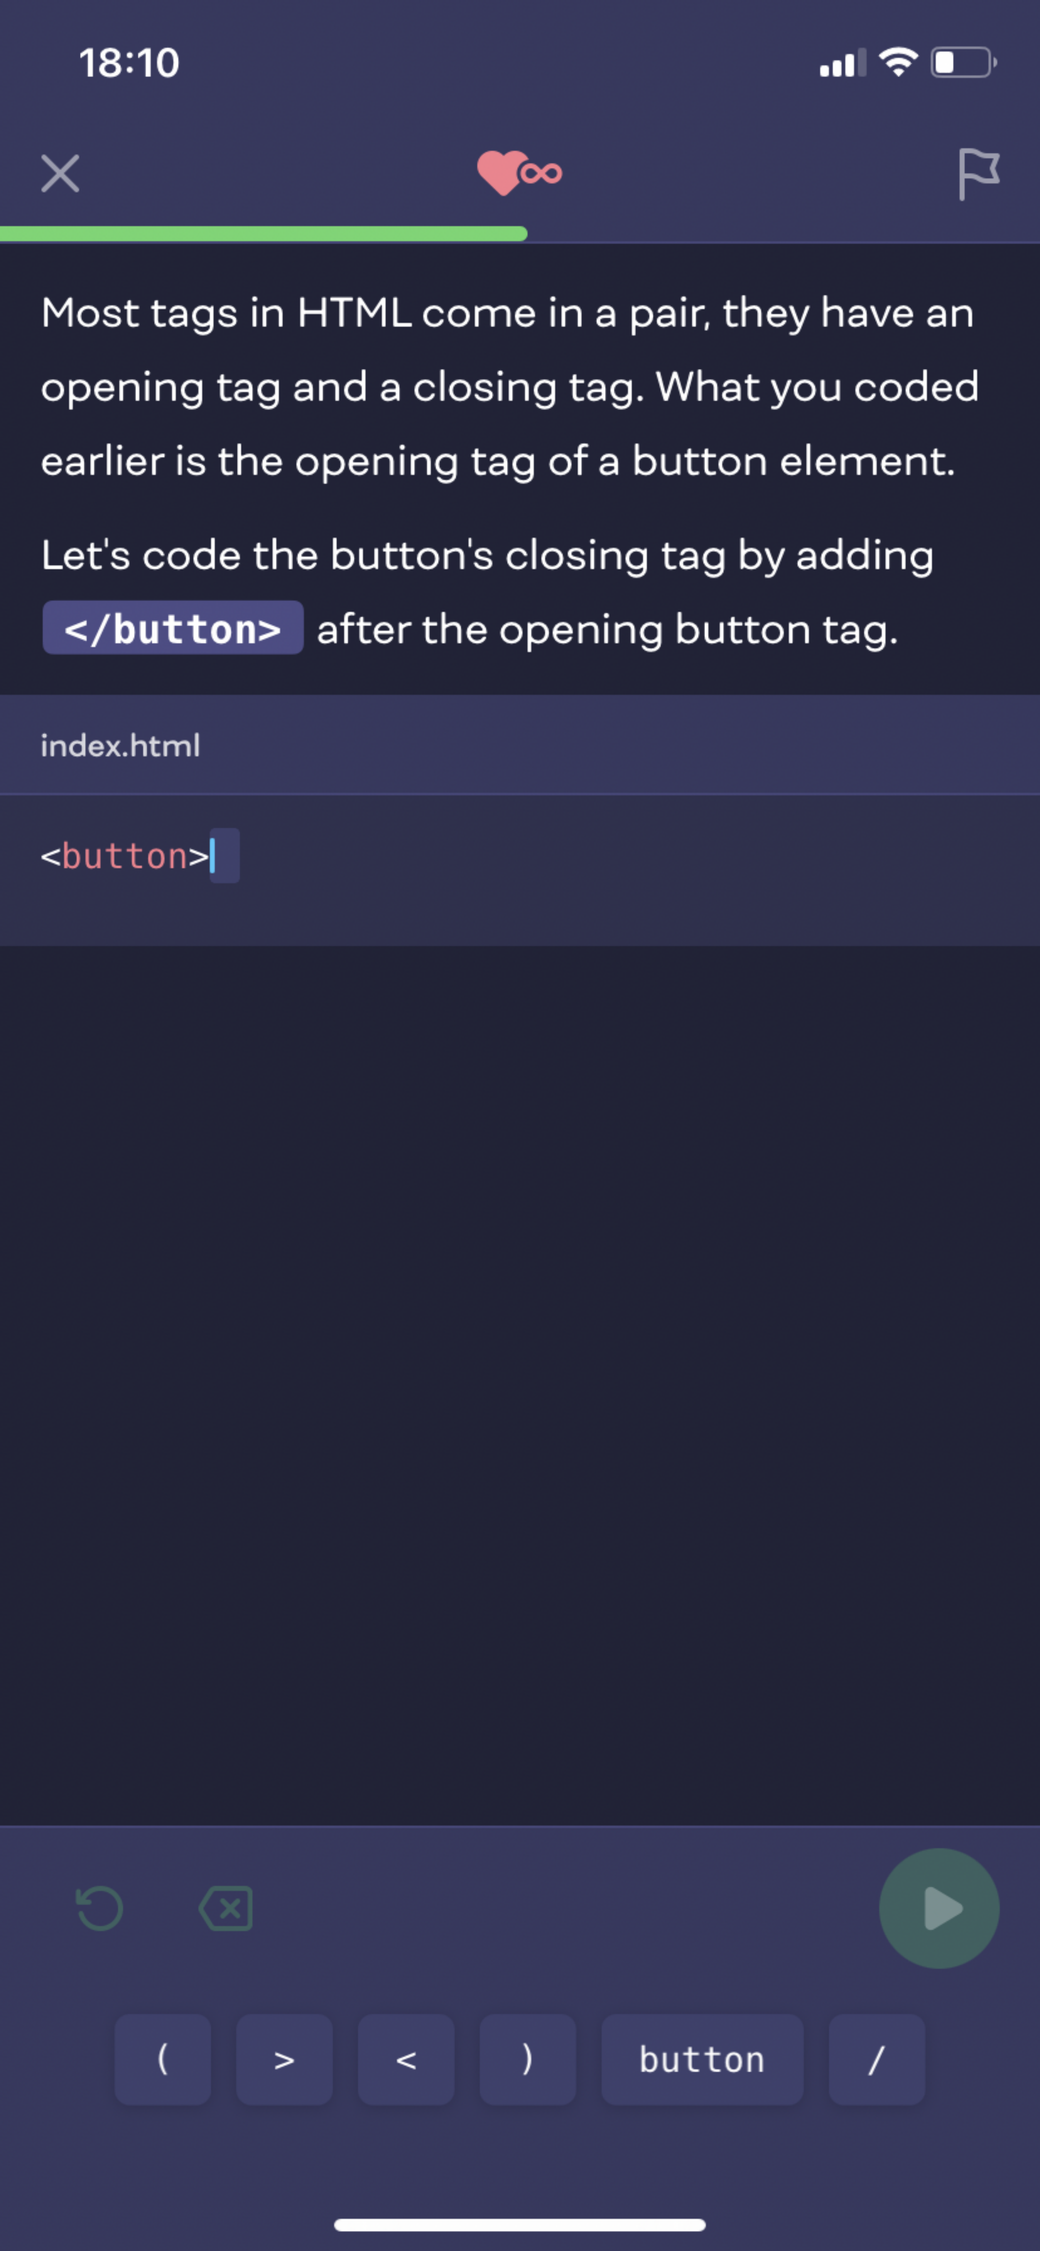
6 IN A ROW!
CONTINUE

What do you think comes after the opening tag: `<button>`?

- The closing tag: `</button>`
- Another opening tag: `<button>`

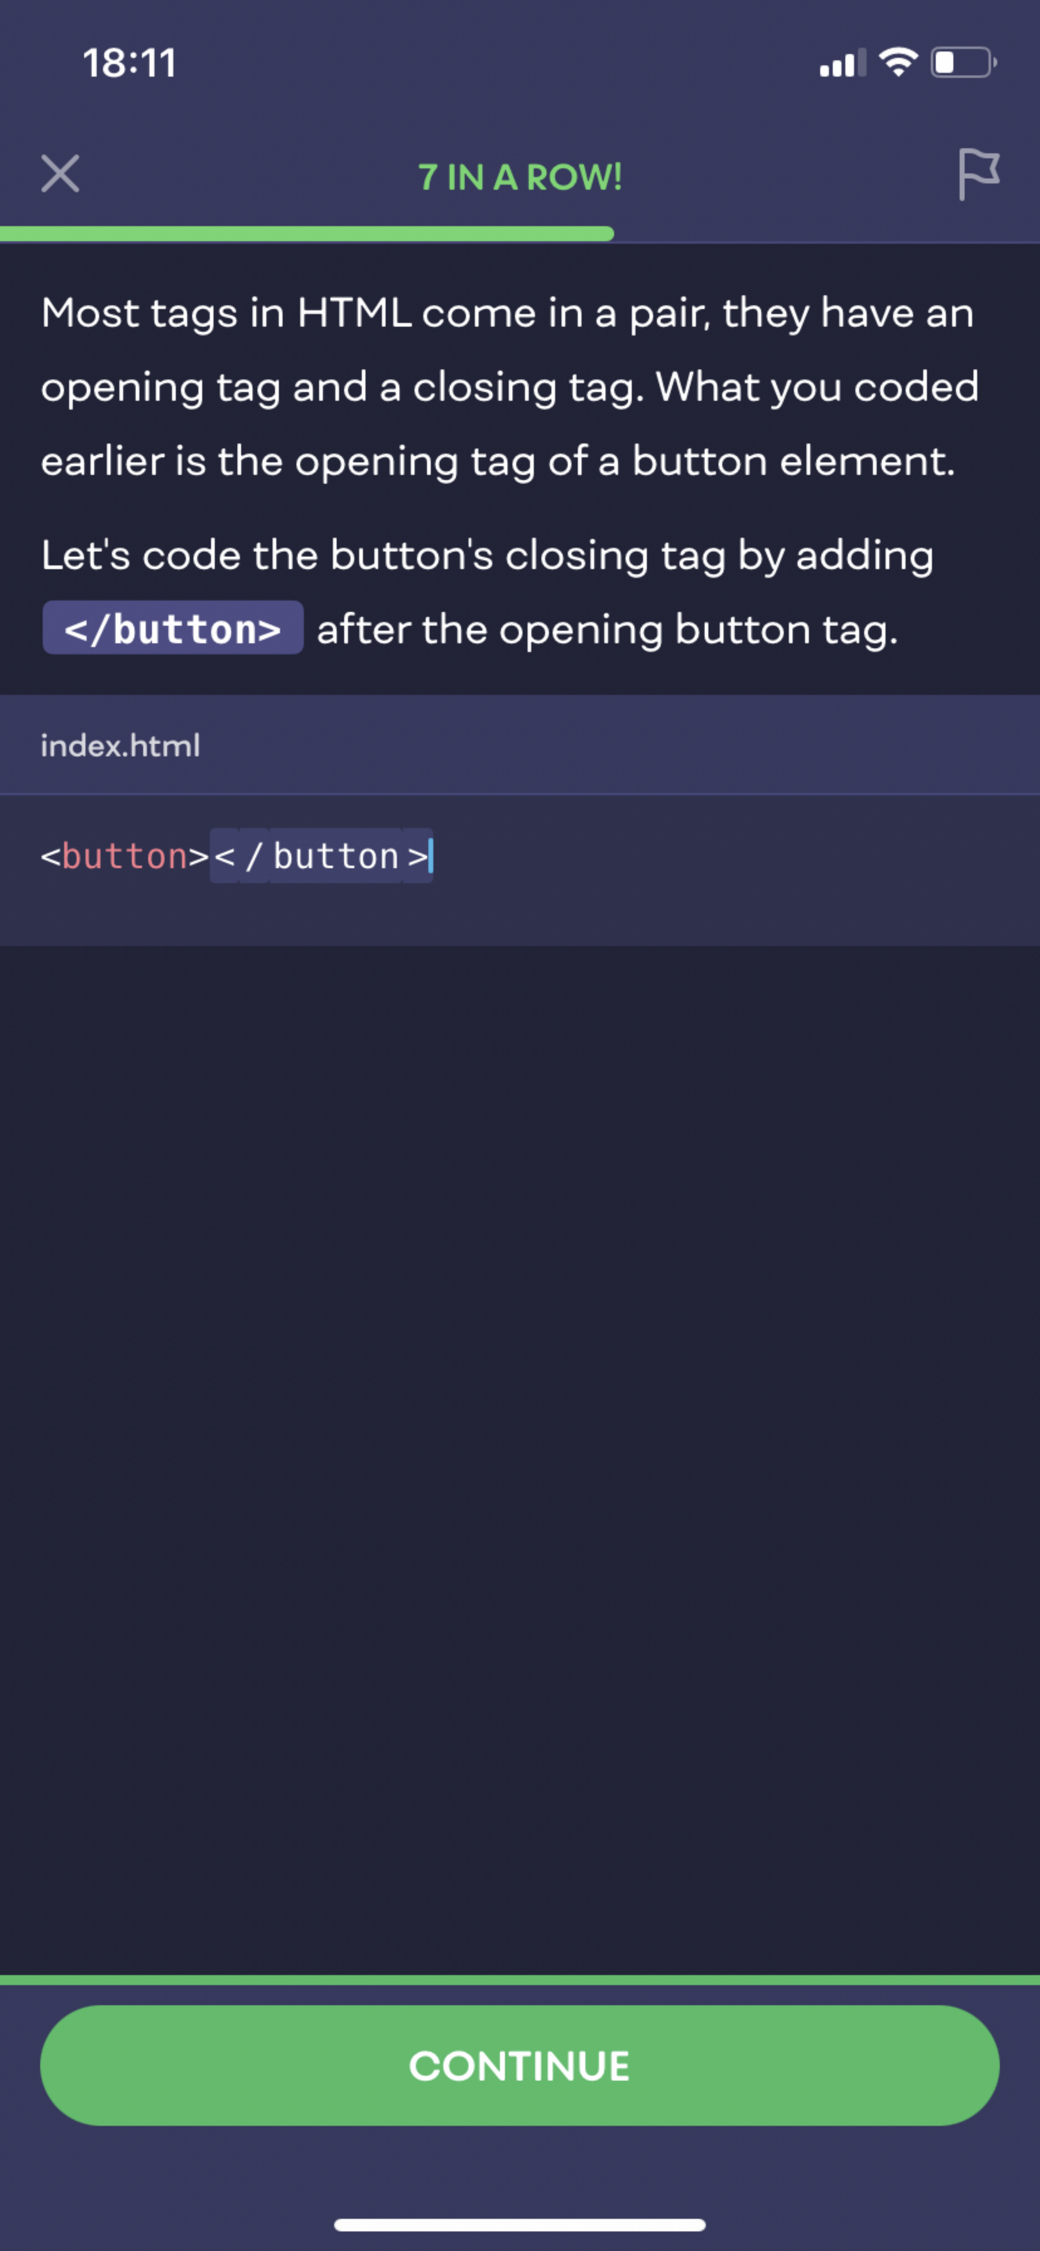


Most tags in HTML come in a pair, they have an opening tag and a closing tag. What you coded earlier is the opening tag of a button element.

Let's code the button's closing tag by adding `</button>` after the opening button tag.

index.html

```
<button>
```



18:11
7 IN A ROW!

Most tags in HTML come in a pair, they have an opening tag and a closing tag. What you coded earlier is the opening tag of a button element.

Let's code the button's closing tag by adding `</button>` after the opening button tag.
